stripe

Product Manager

Build products to make customers successful.

At Stripe, Product Managers help build innovative payments products for our customers. Product development is an extremely collaborative effort between engineering, design, and customer-facing teams. You'd be joining a small group of experienced Product Managers who have helped build successful products at companies such as Apple, Facebook, Flipboard, Google, Microsoft, and Twitter.

Stripe product teams develop everything from our <u>core payments APIs</u>, to <u>powerful dashboards</u>, to <u>mobile</u> <u>apps</u> and <u>consumer-facing products</u>. Some recent projects from the team include <u>Stripe Atlas</u> and <u>ACH</u> <u>Payments</u>.

YOU MAY BE A GOOD FIT IF:

- You can think in terms of the big picture, but deliver on the details
- You have a nose for great products, and advocate for new features with qualitative and quantitative reasoning
- You do whatever it takes to make your product and team successful, whether that means writing a QA plan or hunting down the root cause of a user's frustration
- You can turn incomplete, conflicting, or ambiguous inputs into solid action plans
- You communicate with empathy and exceptional precision
- You are technical enough to ask engineers good questions about architecture and product decisions alike
- · Beyond just shipping new products, you obsess about continuous product improvement

REQUIREMENTS

- You've spent at least five years in product development, with years of experience specifically in product management
- You've mentored product managers, engineers, and designers in how to work together to build great products

YOU SHOULD INCLUDE THESE IN YOUR APPLICATION:

A few words on...

- Why you're interested in being a product manager at Stripe in particular
- Why product management is useful, and what goes wrong without it
- The product you are most proud of shipping, and your role in its development
- The biggest product mistake you've made (we all have them!)
